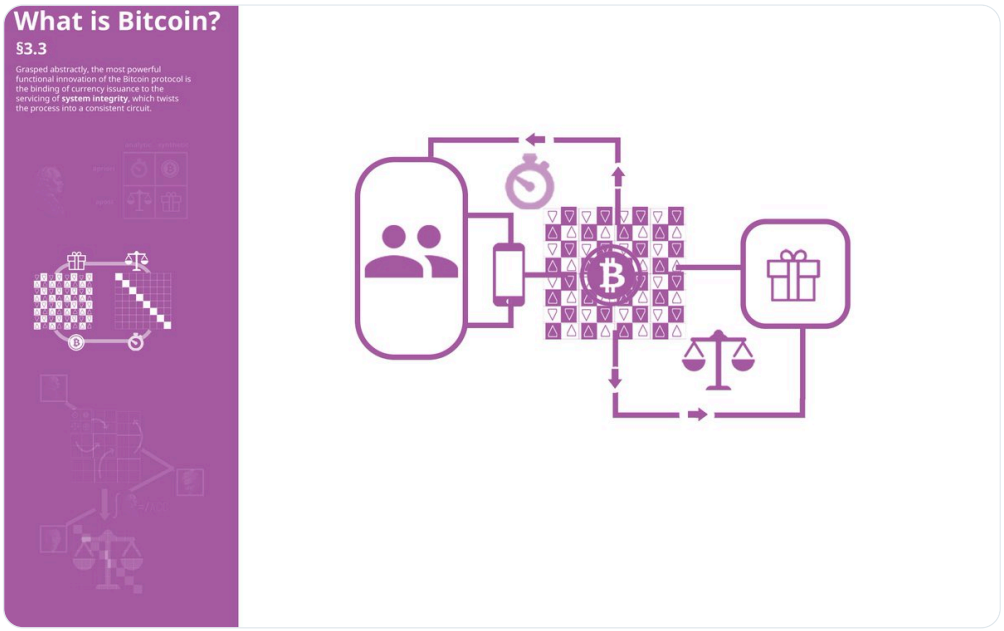
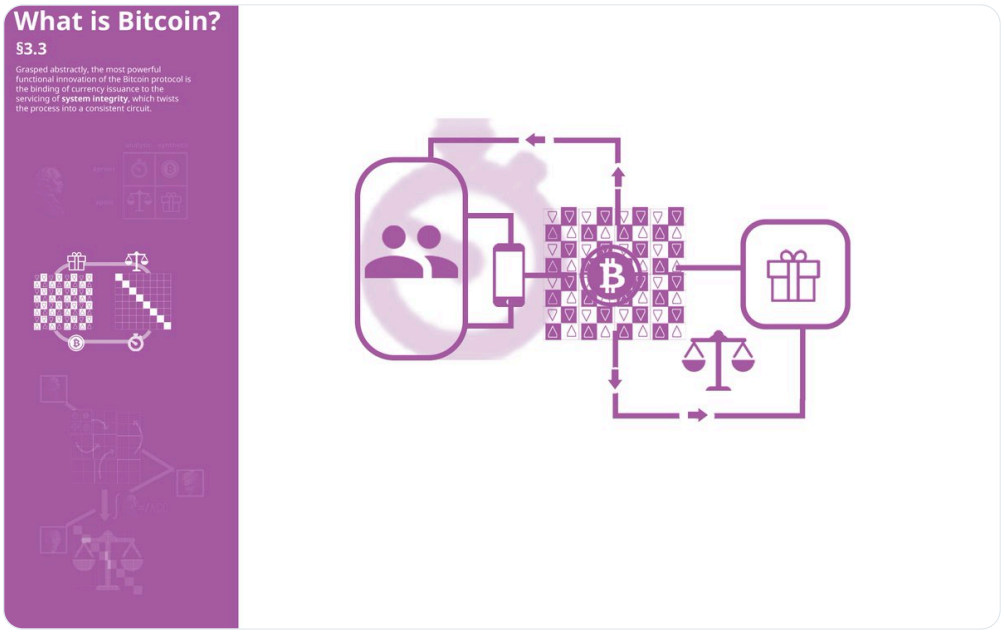
§3.337
bitcoin is an economic system between supply and demand whose propensity is coded toward the maintainance of a the indexed global stock equilibrium. This is undifferentiated from purchasing the largest amount of time for the demander @ the lowest cost of supply delivery.



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.3371

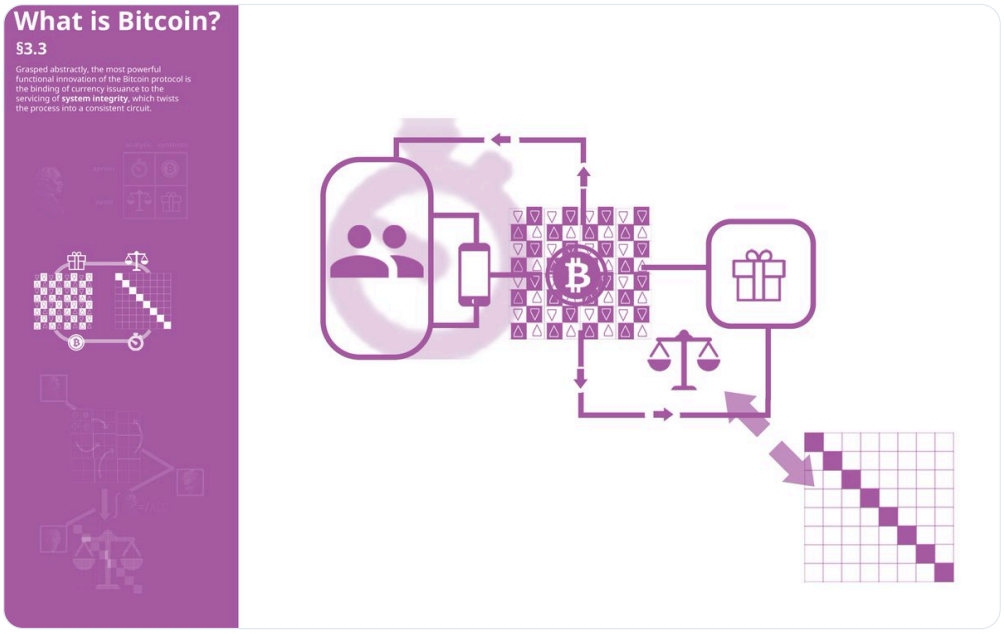
The amount of 🕑 purchased is inv. proportional to the total "cost" of the full service required to produce and deliver the goods from source to its resting point. If this price is optimized at the total global product,the amount of time purchased can be considered ♾️



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.3372

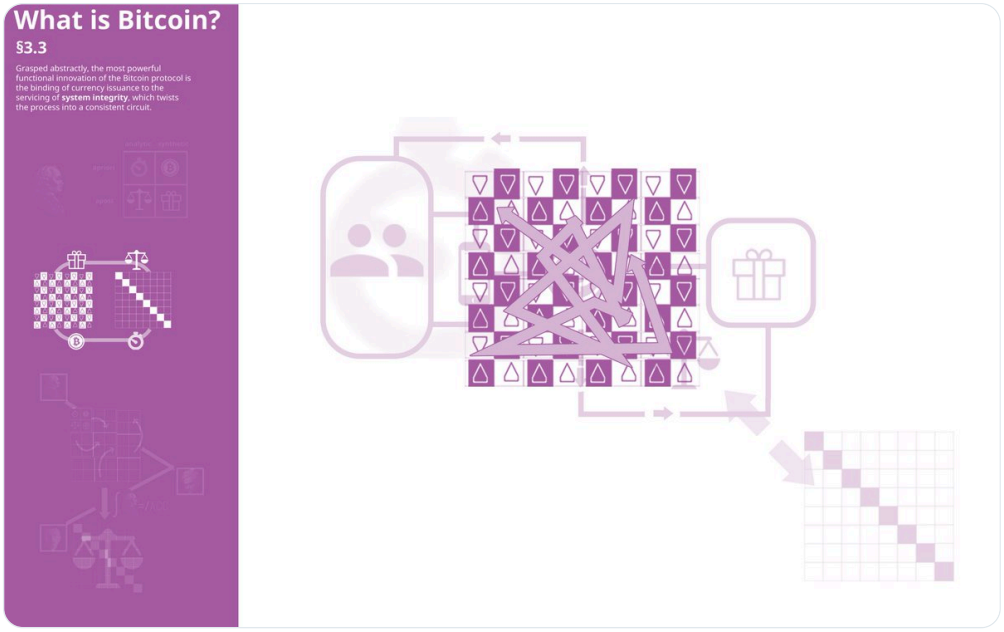
The amount of 🕑 purchased would hence only be hindered by the complexity of the computation of the diagonal that achieves the range of this optimal cost.



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

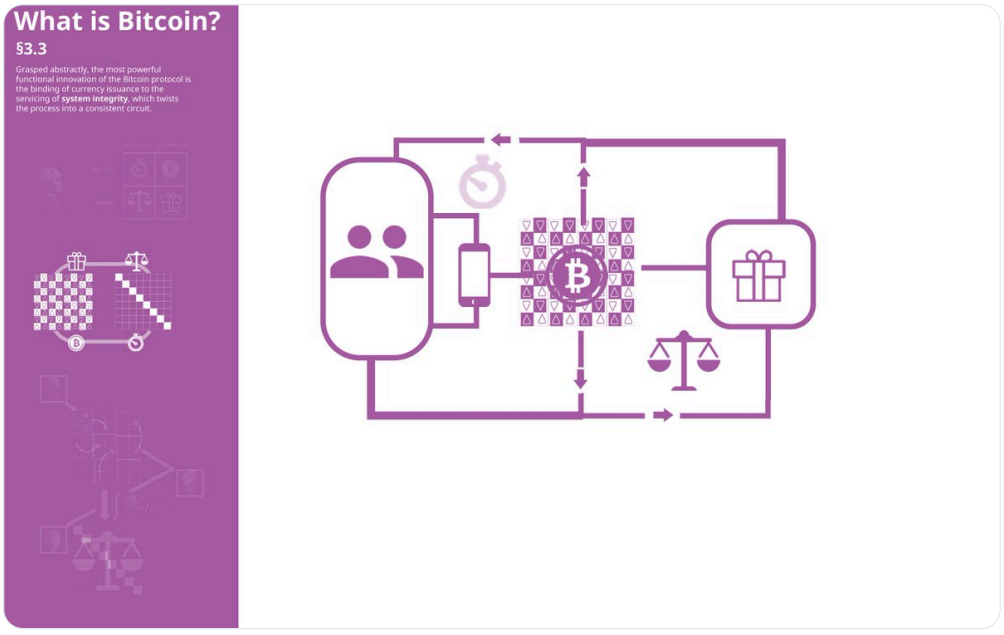
§3.3373

Since the cost of goods produced is known apriori by a formulation consisting of the total existing amount of products created, the only challenge would be the (re)computation of the new diagonal thwarted by the amount of demand controlling the mobility of those products.



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.3374
The most natural (ontogenetic) solution is hence to close the loop by diagonalizing the supply and the demand. Desire becomes immanent to Bitcoin, incapable of transcending it.



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.3375 The individual becomes the sum total of desire, undifferentiated from that Desire diagonalized at their local/global optima. #cryptocurrent #cryptocene

objet petit a

§3.341

Time is ofshored out of retentional bioware to the machine, value is replaced by diagonalization, property ownership is no longer sensical and the question of Being recapitulates after exiting the uncanny valley.

#cryptocurrent #cryptocene
